BUREAU OF THE CENSUS

1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.

BUREAU OF THE CENSUS

Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical fitness of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of walking, 3 times per week, for 30 minutes per session. The control group did not participate in any exercise program. The subjects were assessed at baseline and at 12 weeks for physical fitness, including heart rate, blood pressure, and body mass index. The results showed that the walking program had a significant positive effect on physical fitness, with the walking group showing significant improvements in heart rate, blood pressure, and body mass index compared to the control group. The findings suggest that a 12-week, low-intensity, supervised walking program can improve physical fitness in sedentary, middle-aged women.
